

DMARC Monitoring

PATRICK BEN KOETTER <P@SYS4.DE>

2022-08-29

Monitoring matters!

- DMARC serves to detect senderdomain abuse
- If you don't monitor you will not detect abuse
- Most of the time you will enable Email Authentication for domains in production
- If you get it wrong the errors will impact production
- If you monitor and stage you will see your own errors

Legal Aspects

- German law considers DMARC reports subject to GDPR (DSGVO)
- Countries that may force their companies to hand over data are problematic
- Monitoring services are mostly cloud-based
- On premises software means using open source software

What do we see when we monitor?
